

IS YOUR MAN OK?

**35,000 men a year
are diagnosed as having
PROSTATE CANCER**

**If his nights are disturbed by needing to go to the loo,
If he has difficulty starting to wee,
If the flow is weak, just a dribble, or
If he feels he has more wee to come after he has stopped,**

Even with these symptoms –

He may not have prostate cancer

**But when 10,000 men a year die from prostate cancer
through not getting diagnosed early enough**

Don't let him take the risk.

Don't ignore the symptoms.

**GET HIM TO SEE HIS DOCTOR
PLAY SAFE, CHECK IT OUT**

**Please help to raise awareness in others,
See www.prostatecancercheckitout.me.uk for more information**
